

## The Orbitsound range

*Audio fans will love the sound of this new range from acclaimed British audio technology brand*

**London, 3 June 2010:** Since its revolutionary spatial stereo technology was unveiled at CES 2008, British audio technology company Orbitsound has received critical acclaim for its stylish and great sounding audio products. That's because, thanks to a mixture of unique patents and the application of heavyweight scientific principles to the positioning of speakers within the unit, Orbitsound products produce realistic stereo sound with depth and clarity to rival the much more expensive sound systems. Today the company announces two new products that will deliver stunning audio quality, wherever you are and whatever you're listening to.

**NEW: T12 v2 soundbar, £299.99, available in June 2010 from John Lewis**

Everywhere is the 'sweet spot' with this soundbar, designed to be mounted above or beneath a flatscreen TV screen or tucked away neatly out of sight. In welcome news for audio fans, this brand new system follows on from the original T12 - which sold out shortly after being issued on limited release. Its spatial stereo technology will redefine the way you listen to music or experience home cinema, bringing extraordinary clarity and depth of sound wherever the system is positioned, while its stylish black lacquer finish makes this one of the most elegant home entertainment systems on the market. With an improved sub feeder cable which makes installation simpler than ever, along with *Works With iPod and iPhone* accreditation from Apple, the T12 can even cut a staggering 40% on your energy consumption.

**NEW: T4 Radiopod, £179.99, available from summer 2010**

This iPod dock and radio uses Wi-Fi for users to access digital and internet radio from around the world. Push-button controls and clear dot-matrix display allow you to search thousands of stations and podcasts, while the compact and durable design means you can enjoy all this at home or on the move. Spatial stereo technology ensures that music, talk and sports radio can all be heard in true stereo quality, and if you prefer to choose your own tunes, an input for your iPod makes your mp3s sound better than ever before. The T4 features internet, DAB, DAB+ and FM radio, and – because we know it takes more than great audio to make Mondays bearable – a digital clock alarm with snooze function, too.

**T3 portable speaker, £49.99**

Designed to let you share music from iPods, iPhones and other music mobiles, the palm-sized T3 can also be used to make your PSP and Nintendo DS games sound great. This durable and versatile speaker is not only the perfect addition to your holiday, but is also the simplest way to brighten a barbeque, energise your exercise sessions and add atmosphere to house parties. It is also great for business travellers and transforms the tinny sound from laptop and desktop computers. Lightweight, and affordable and a lot of fun, this portable speaker comes with 10 hours plus of playback time per charge, and can even be worn around the neck to create a 'halo' of sensational high quality stereo sound.

### **About Orbitsound**

Orbitsound's unique spatial stereo technology was first designed and realised in 2005 by Ted Fletcher, a former musician and renowned audio electronics designer with more than five decades in the music business. Former investment bankers Harvinder Hungin and John Cameron supported the development of the technology from early 2006, becoming Executive Directors of Orbitsound shortly after the company was established later the following year. At CES 2008 Orbitsound's products were highlighted on BBC and CNN news, and won a prestigious place in Disney's *Best of CES* show. And at this year's CES Unveiled, Orbitsound was showcased by UK Trade & Investment (UKTI) as one of the top two innovative UK technology companies with potential for international success. The latest range launches globally in 2010.
