

Make more of your music with Orbitsound's T3

Portable speaker may be small – but packs some serious sound quality

London: If you've got a mobile phone or mp3 player packed with fantastic music, why keep it all to yourself? Make sure your tracks get the attention they deserve with the T3 portable speaker from Orbitsound.

Designed to let you share music from iPods, iPhones and other music mobiles, the palm-sized T3 can also be used to make your PSP and Nintendo DS games sound great. This durable and versatile speaker is not only the perfect addition to your holiday, but is also the simplest way to brighten a barbeque, energise your exercise sessions and add atmosphere to house parties. Because, as well as being lightweight and affordable (and a lot of fun), it produces sensational high quality stereo sound that's unheard of from other portable speakers.

The fantastic sound quality delivered by the T3 comes courtesy of Orbitsound's unique spatial stereo technology. Thanks to a mixture of unique patents and the application of heavyweight scientific principles to the positioning of speakers within the unit, the T3 produces incredible, true stereo sound throughout the whole room, wherever you're standing.

There's also no need to settle for tinny sound when watching TV and DVDs through your desktop or laptop computer when the T3 will bring a realistic stereo experience to all your video content. What's more, its lithium rechargeable battery provides at least 10 hours of playing time on a single charge (more than enough YouTube videos, we're sure you'll agree).

'So many of us enjoy music and videos on the go,' explains Ted Fletcher, founder of Orbitsound

and creator of its unique spatial sound technology. 'And there's no need to settle for sub-standard sound quality. The T3 is stylish, compact and, most importantly, delivers remarkable sound quality, whatever you're playing and wherever you are.'

An included lanyard allows you to wear the T3 around the neck, allowing you to enjoy your favourite audio without having to resort to headphones – a good idea if you're walking near busy roads, and don't want to be completely cut off from your surroundings. When using the T3 in this way an incredible stereo aura is created around the listener's head, meaning that you'll still experience the fantastic sound quality Orbitsound is known for.

The T3 costs £49.99. For more information about Orbitsound and the T3, visit www.orbitsound.com

About Orbitsound

Orbitsound's unique spatial stereo technology was first designed and realised in 2005 by Ted Fletcher, a former musician and renowned audio electronics designer with more than five decades in the music business. Former investment bankers Harvinder Hungin and John Cameron supported the development of the technology from early 2006, becoming Executive Directors of Orbitsound shortly after the company was established later the following year. At CES 2008 Orbitsound's products were highlighted on BBC and CNN news, and won a prestigious place in Disney's *Best of CES* show. And at this year's CES Unveiled, Orbitsound was showcased by UK Trade & Investment (UKTI) as one of the top two innovative UK technology companies with potential for international success. The latest range launches globally in 2010.
